

HUMAN FACTORS IN COMPLEX SYSTEMS

Dr Hazel Courteney

UK CAA

Video

Summary Points

- ▣ People make errors including good people – even smart, competent, well trained professional people who are committed to doing a good job sometimes get it wrong

What Kind of Errors?

ERRORS

- ▣ Slips and Lapses
- ▣ Mistakes
- ▣ Skills
- ▣ Violations

MITIGATIONS (NOT EXHAUSTIVE)

- ▣ HF environment
- ▣ Don't rely on perfection
- ▣ Training
- ▣ Secondary information
- ▣ Training
- ▣ Practice
- ▣ Education
- ▣ Solid Barriers

Summary Points

- ▣ People make errors – including good people
- ▣ Different kinds of errors require different kinds of mitigation

Complex and Automated Systems

FEATURES

- ▣ Not entirely predictable because they may behave – or fail – in unexpected ways
- ▣ May make unrealistic assumptions about human performance
- ▣ May not interact smoothly with other systems

WAYS FORWARD

- ▣ Back to basics – if the cause of the system is variable make the correction simple
- ▣ Use known data – are you relying on humans to do what we already know they are unlikely to do?
- ▣ Consideration of other systems during certification and validation technology

Summary Points

- ▣ People make errors – including good people
- ▣ Different kinds of errors require different kinds of mitigation
- ▣ Complex systems need to be designed to have simple corrections
